Candle Care Card — Soy Wax

SOY WAX CANDLE

Caring for your candle

- **First burn:** let the wax melt all the way to the edge — about one hour for every inch across.
- Burn no more than **four hours** at a time.
- Trim the wick to **¼ inch** before every burn.
- Never leave a burning candle unattended. Keep it away from drafts, and at least **12 inches** from anything that can burn.
- Keep out of reach of children and pets.
- Stop burning when **½ inch** of wax remains.
- A white, frosty look on soy wax is natural. It doesn't change how your candle burns or smells.
- Store it out of direct sun, somewhere the temperature stays steady.
