

FREE CARE INSTRUCTIONS · 1 OF 3

Soy-Heavy Wax Candle Care

Ready to copy and paste for your customers.

Before each burn

Trim the wick to ¼ inch (6 mm). Remove wick trimmings and debris.

The first few burns

Avoid repeated short burns. Give the melted wax time to spread toward the edges without exceeding the burn limit. A small rim of wax during the first few burns can be normal.

Burn time

Burn no longer than 4 hours, or the shorter time shown on your candle.

About your wax

Frosting or an uneven surface after cooling can be normal for soy-heavy wax blends.

Between burns

Let the candle cool completely before handling or relighting. Store away from heat and direct sunlight.

Burn safely

Always burn within sight on a stable, heat-resistant surface. Keep away from drafts, children, pets and anything that can catch fire.

When to stop

Stop using when ½ inch (13 mm) of wax remains. Never extinguish with water.

Copy this text onto your own care cards, labels, product listings or website. Each candle's own burn time comes from your burn tests.

Coconut-Heavy Wax Candle Care

Ready to copy and paste for your customers.

Before each burn

Trim the wick to ¼ inch (6 mm). Remove wick trimmings and debris.

The first few burns

You don't need an edge-to-edge melt pool. A little wax remaining on the sides is normal for this coconut-rich blend and should gradually melt down as the candle burns lower. Never extend a burn to force the edges to melt.

Burn time

Burn no longer than 4 hours, or the shorter time shown on your candle.

About your wax

This soft wax blend is sensitive to warmth. Store upright, away from heat and direct sunlight. Never leave it in a hot car.

Between burns

Let the candle cool completely before handling or relighting.

Burn safely

Always burn within sight on a stable, heat-resistant surface. Keep away from drafts, children, pets and anything that can catch fire.

When to stop

Stop using when ½ inch (13 mm) of wax remains. Never extinguish with water.

FREE CARE INSTRUCTIONS · 3 OF 3

Wax Melt Care

Ready to copy and paste for your customers.

Using your melts

Remove all packaging before placing wax in the warmer dish. Use a tealight warmer designed for wax melts or a UL-listed electric wax warmer. Follow its instructions for wax quantity and operating time.

Don't overfill

Leave room for the wax to melt. Never add water or fragrance oil. Never light the wax directly or heat it on a stovetop.

Enjoy safely

Never leave a warmer unattended while in use. Place it on a flat, stable, heat-resistant surface in a well-ventilated area, away from drafts and flammable materials.

Keep out of reach

Keep wax and warmers away from children and pets. Wax melts are not edible.

After use

Switch off the warmer or extinguish the tealight. Allow the warmer and wax to cool completely before handling or moving.

Refresh your wax

Replace when the scent fades. Remove used wax according to your warmer's instructions. Put hardened wax in the trash—never down a drain.

Store with care

Keep unused melts in their packaging in a cool, dry place away from heat and direct sunlight.
